The computer is a large amount of more powerful than any major computer used in the past, and its performance in calculations and memory load is greater than a home desktop computer. Some programs, such as CPU intensive applications like CAD, paint, 3d, rendering engines, as well as some games, require more powerful computing hardware to run effectively. As an example, a game with full 3D graphics would easily require a serious graphics card and lots of RAM to run Assignment Library After the release of Final Fantasy X-2 and its popularity, Square Enix and Naure have come up with Final Fantasy X-2 Unlimited, a hack and slash RPG game. In Final Fantasy X-2 Unlimited, players

can assume the role of Cloud, who is looking to save the world from darkness using the power of crystals. Final Fantasy X-2 Unlimited is a massively multiplayer online game that allows players to create their own characters, play in a variety of modes, and obtain various items. New features in Final Fantasy X-2 Unlimited include a new battle system, a novel style job system, and a levelling system. As in Final Fantasy X, each character in the game possesses different skills, such as magic and physical attacks. Final Fantasy X-2 Unlimited also has a levelling system, in which players level up with experience points (EXP). As players increase their level, they can level up certain skills. Even though a level boosts a skill, the player can still assign a skill from his or her job to this skill. For example, a level 30 job can assign a weapon skill to an attack skill, increasing the amount of damage that skill does. Likewise, when playing the game, players can access a variety of jobs, each with their own strengths and weaknesses. Players also have the option to form teams of two or more characters. After playing a game, players receive EXP, which increases the level of the characters. When playing Final Fantasy X-2 Unlimited, players can only level up by playing a game; they cannot gain EXP with

quests, or any other means. While playing the game, they also receive money, and an item called a ring that grants the character's next job. After raising his or her level, the player can select a new job. Jobs are designed as a distinct class. For example, warriors, mages, and casters are the four classes in the game.
